

Lead retrieval scanner

Lead retrieval scanners are available through our onsite third party registration team and offer an easy-to-use small scanning device that reads barcodes on the event badge. It facilitates quick scanning and retrieval of attendee and booth guest information.

Product Overview

The eScan product offers organisations the hardware and software required to effectively collect and disburse data collected through scanning barcodes. During your event, simply scan the badge of each person who visits your booth. Following the event, scanners are collected, the data uploaded to a secure site and instructions provided to individuals and/or companies that need to access the data for download.

Cost: \$120 + GST

To book your scanner for this event, please visit -
